Key Observations

- Overall average MTTR is **8359 minutes** (median 5760 min) across 2572 incidents.
- **PolicyCenter** accounts for 2154 incidents (83.7% of total).
- **BillingCenter** accounts for 328 incidents (12.8% of total).
- **PWCNJCDs** accounts for 6 incidents (0.2% of total).
- **68** incidents (2.6%) are currently open.
- **942** high/top-priority incidents require attention.

Root Cause Themes

- Code Issue / Escaped Defect — 534 incidents (20.8%)
- Error — 484 incidents (18.8%)
- Not an Issue/Business Request — 458 incidents (17.8%)
- User Error — 330 incidents (12.8%)
- Design Issue — 268 incidents (10.4%)

Recommendations

- Address **Application Errors** — avg MTTR of 9794 min. Investigate root causes and create runbooks.

- Address **Business Requests & Non-Incidents** — avg MTTR of 8962 min. Investigate root causes and create runbooks.
- Address **Code / Defect Incidents** — avg MTTR of 8669 min. Investigate root causes and create runbooks.

Quick Wins

- Escalate 56 vendor-related incidents to SLAs; track resolution via a dedicated Vendor Issue Dashboard.
- Convert 330 User Error incidents into self-service knowledge articles.

Methodology: MTTR computed from (Actual Finish Date – Open Date). Clustering uses combined TF-IDF (Description) + one-hot encoding of Category, CI Category, Classification, ClosureCode, Priority, Portfolio, RC Portfolio. Pattern labels assigned by dominant Category mapping; LLM used as fallback. Winsorised MTTR (p1–p99).
